

New Product Release

AC & DC BACKWARD CURVED IMPELLER BLOWERS

The backward curved impeller design is ideally suited for those applications requiring high airflow performance in high static pressure conditions where space for a blower is limited. This style of blower adapts easily to a wide range of applications and unique packaging is available to meet specialized requirements.

These blowers are available in 115 and 230 VAC, 50/60 Hz as well as 24 and 48 VDC (Brushless). Contact Kooltronic for model availability and design specifications. 115 and 230 VAC models are UL/CUL and CE approved.

NOTE: These units require a capacitor for operation. Capacitors are sold separately and shipped loose for field installation by customer. An inlet ring is recommended for optimum performance. These are sold separately, to be installed by customer.

FEATURES:

- Low noise level
- Compact size
- External rotor design
- 180-1295 CFM
- Precision balanced
- Ball bearing motor

TYPICAL INSTALLATION

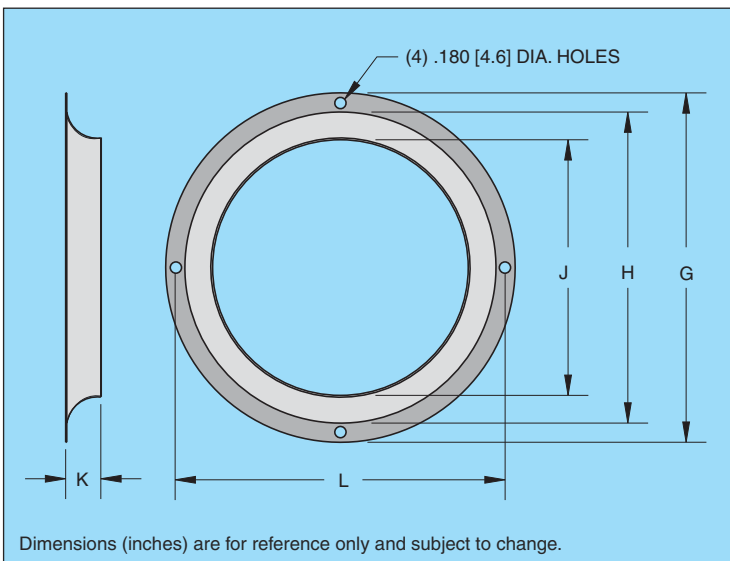

BACKWARD CURVED IMPELLER BLOWERS

DIMENSIONS (inches [metric])

Model	A	B	C	D	E	F	Optional Inlet Ring Part Number
2-Pole AC

2-Pole AC Performance*

4-Pole AC Performance*

CONVERSION FACTORS

Multiply airflow in cubic feet per minute (CFM) by:

- 1.7 to obtain airflow in cubic meters per hour (m³/hr.)
- 0.47 to obtain airflow in liters per second (L/S)

Multiply static pressure in inches of water ("H₂O) by:

- 25.4 to obtain static pressure in millimeters of water (mm H₂O)
- 249 to obtain static pressure in Pascals (Pa)

24-Volt DC Performance

48-Volt DC Performance

For 2-Pole and 4-Pole models airflow vs. static pressure curves are shown for 60 Hz inputs, consult Kooltronic for 50 Hz performance. All pressure curves are shown using optional inlet ring. Static pressure is in inches of water.

HOW TO ORDER

Specify model number. For 230 VAC operation, add a 2 after the K. Example: K2BB2E195/25.
